

SIENA 20-10-50

Dear Professor Lederberg,

I feel very much honoured for your letter of October, 15.

I am very glad to be able to furnish you the requested strains "E.Coli I", Coli UQ, Coli SG and a mutant strain which strongly resembles in the morphology and in biochemical activities the inducing strain.

Since my Director, Prof. Luigi Michelazzi, has been called to direction of the more important Department of General Pathology of the University of Genova, our researches were necessarily interrupted for some months.

Therefore, I will make a control of the biochemical properties of the strains I have described before sending you.

I join the reprint of my work "Mutazioni dirette dagli acidi nucleinici batterici" published on

Boll. Ist. Sierot. Milan.; in effects, Experientia has
not till now send me the reprints of my work
"Mutation in the enzymatic equipment...." which
you have requested.

You will oblige me, if you could send the reprints
of your recent works on genetic recombination.

Thanking you very much, I am yours

very sincerely

Mario U. Dianzani,
M.D., Ph.D.
